Subject: Operation, Monitoring, and Maintenance Plan Revision

David,

In accordance with the Administrative Settlement Agreement and Order on Consent for Removal Action for the San Jacinto River Waste Pits Superfund Site, paragraph 65, the EPA is hereby directing the Respondents to implement modifications to the Operation, Monitoring, and Maintenance Plan as follows:

1. Implement an armor cap surveillance program using remotely monitored cameras with 24 hour per day and 7 days per week monitoring. The daily surveillance information shall be made available to EPA within 24 hours. The Respondents shall submit a workplan to EPA within 14 days of receipt of this notification for review and approval or modification to implement this surveillance program.
2. Install additional warning buoys around the perimeter of the underwater edge of the armor cap so that the complete shoreline is covered. The Respondents shall submit a workplan to EPA within 14 days of receipt of this notification for review and approval or modification to implement the buoy installation.
3. Increase the frequency of the current cap inspections from semi-annually to quarterly until further notice. The increased frequency shall begin following the next regularly scheduled inspection.
4. Additional revisions may be forthcoming following the results of the U.S. Army Corps of Engineers review and recommendations regarding the inspection procedures and armor cap protective measures.

The above revisions have been discussed previously with the Respondents, with the exception of the change in inspection frequency. We will followup-up this email with a letter. Please let me know if you have any questions on this.

Regards,

Gary Miller
